1 / 1 point

1. Six Sigma is equally effective with project teams as with individuals working alone.

- ☐ True
- ☒ False

✔ Correct

Correct. The most effective way to improve quality and process performance is through the use of cross-functional, multi-level teams tasked with specific improvement goals. Team-based projects are therefore key to the effective use of Six Sigma.

1 / 1 point

2. Ad-hoc team members attend all team meetings and activities.

- ☐ True
- ☒ False

✔ Correct

Ad-Hoc members only attend team meetings when their expertise is needed to advance the project.

1 / 1 point

3. Black Belts usually lead larger scale, cross-functional projects and Green Belts often lead smaller scale projects that are not cross-functional.

- ☒ True
- ☐ False

✔ Correct

Correct. Black Belts are usually used as team leaders for larger scale, cross-functional projects, but Green Belts are often used for smaller scale projects that are not cross-functional.

1 / 1 point

4. Six Sigma project team members will only work on the project during team meetings.

- ☐ True
- ☒ False

✔ Correct

Correct. Six Sigma project team members will work together during team meetings to complete the project to the best of their ability as directed by the team leader, but they will also work outside of team meetings to complete tasks assigned to them by the team.

1 / 1 point

5. Who are the primary internal customers of Six Sigma project teams?

- ☐ The outside customer
- ☐ The project Champion
- ☐ Top management
- ☒ The process owner for the process being investigated

✔ Correct

Correct. The project team works for the process owner - they both share responsibility for the success or failure of the Six Sigma project. Process owners are therefore the primary internal customers of the Six Sigma project teams working on their processes.

1 / 1 point

6. During which stage of team development will team members sometimes begin to feel overwhelmed by the work ahead or uncomfortable with the team's approach and question the team leader's authority?

- ☒ Storming
- ☐ Mourning
- ☐ Forming
- ☐ Norming

✔ Correct

Correct. During the storming stage, team members often begin to "jockey" for position on the team and try to clarify their roles as well as how the team will work together. Some team members may begin to feel overwhelmed by the work ahead or uncomfortable with the team's approach and, as a result, the team leader's authority may be challenged during this stage, the purpose of the team questioned, and some members may resist taking on tasks. Many teams fail when they get to the Storming stage, especially if the leader (or organization) is not able to provide the necessary level of support.

1 / 1 point

7. The Forming – Storming – Norming – Performing stages of team development apply to all Six Sigma teams.

- ☐ True
- ☒ False

✔ Correct

Correct. The stages of team development apply to many teams, but not all. Some teams skip stages, especially if they've worked together before or have experience with Six Sigma.
